

March 2016

The cost of university education to jump 32 per cent in the next decade

The cost of a university education is estimated to rise by 32 per cent in the next decade according to exclusive research released today.

The first year course costs for accounting, law, veterinary science and medicine degrees are estimated to jump from \$10,440 per year in 2016 to \$13,801 in 2026, while the cost of a journalism, nursing, teaching or psychology degree in the first year, is estimated to rise by \$2,014 to \$8,270 in 2026.

The ASG Planning for University Index, compiled by the member based organisation, considers a range of variables including university course fees and expenses for transport, computers, study placements and rent to estimate the true cost of a university education.

The ASG Cost of University Index also reveals that living costs are set to increase by up to 23 per cent in the next decade for students who live away from home, with a three year photography degree estimated to cost up to \$102,580 in living expenses by 2026, a jump of almost \$20,000.

Students who live at home while attending university will be up to \$63,712 better off than students who rent, with a three year photography degree estimated to cost up to \$38,868 in living expenses.

When university course costs and living expenses (renting) are combined, ASG estimates the cost of a four year law degree will jump by \$40,256 in the next decade to \$195,909 in 2026, with a six year medicine degree forecast to rise by \$62,295 to \$301,159 in 2026.

Peter Halat is in his second year of his Bachelor of Science (Advanced Research) degree at Monash University and drives more than 50 kilometres each day to attend his lectures and labs on campus.

"The cost of petrol has been quite a jump from my usual transport costs and I am also buying textbooks and stationary. University is expensive and I work part-time in a supermarket and also do private tutoring to support myself a bit more financially.

"Living at home has definitely relieved the financial burden but I am looking at moving closer to Monash and continuing on with a PhD. I am always looking to save money and prepare myself just in case if I need to buy something in an emergency.

"Being with ASG has been really beneficial and I am really thankful that my parents were able to plan and save for my education all those years ago. I've also considered studying abroad so that may be possible too," said Mr Halat.

ASG research also found that 56 per cent of university students were either concerned or very concerned about being able to meet their current course and living expenses.

ASG CEO John Velegrinis says a university education can put significant financial pressure on family budgets.

"Many parents plan for their children's early learning, primary and secondary education, only to be blindsided by university course fees and living expenses.

"The cost of sending three children to university can place enormous strain on the family budget and could cost some families close to one million dollars," says Mr Velegrinis.

He says students who live at home while attending university will be financially better off than students who rent, but it's not necessarily great news for parents.

"The ASG Planning for University research discovered almost 60 per cent of students rely on their parents for financial support while at university, adding further financial strain on the family budget," says Mr Velegrinis.

ASG helps parents create educational opportunities for their children. They provide parents with a structured means to prepare for the cost of their children's education, irrespective of their background.

Parents and students can use ASG's free online HELP debt calculator, which allows students and parents to model the total costs of a university education. By factoring in the cost of interest associated with any debt because of study, students and parents are given a true and complete picture of the cost of university.

Editor's notes

The Australian Scholarships Group (ASG) is a member owned organisation, helping to create educational opportunities for children. ASG has been helping families and their children for more than 40 years. During this time, more than 520,000 children have been enrolled with ASG and more than \$2.3 billion in education benefits and scholarship payments returned to members.
